

Façade Reinforcement Mesh

Architectural Shapes

Engineered to maximize strength, conformability, and adhesion to foam shape contours

Product Overview

ADFORS mesh for architectural shapes is specifically engineered to maximize strength, conformability, and adhesion to architectural shape contours. The unique hybrid construction mesh - part polyester part fiberglass - gives increased tensile strength while providing flexibility. Our formulated adhesive allows for thorough bonding to the profile surface, eliminating stretching and bubbling for defect-free architectural shapes.

Benefits

- Engineered coating offers alkali resistance for long term performance
- Specifically formulated adhesive designed for bonding to architectural shapes
- Unique polyester and fiberglass construction provides flexibility for contouring to intricate shapes

Specifications

Available widths	36", 39"
Available lengths	50"
Style	0032
Weight	2.6 oz
